# Analyzing Geo-Spatial Resource Data

## A Hands-on Case Study in Spatial Analysis and Data Mining

**Joseph K. Berry**

*W.M. Keck Scholar in Geosciences  
University of Denver  
Denver, Colorado*

---

# Table of Contents

## 1. Overview

- 1.1 Introduction
- 1.2 Mapping versus Analysis
- 1.3 Suitability Modeling
- 1.4 Some Assembly Required
- 1.5 Exercises
  - Examples of Analysis Capabilities
  - Viewing Full Color Figures
  - Installing Companion Software

## 2. Maps as Data

- 2.1 Visualizing Map Surfaces
- 2.2 Numbers First, Pictures Later
- 2.3 Framing Maps
- 2.4 Organizing Raster Data
- 2.5 Visualizing Map Values
- 2.6 Exercises
  - Interacting with Grid Maps
  - Grid-based Thematic Mapping
  - Map Summary Statistics and Charts
  - Map Normalization

## 3. Reclassifying and Overlaying Maps

- 3.1 A Map-ematical Framework
- 3.2 Reclassifying Map Values
- 3.3 Overlaying Maps
- 3.4 Characterizing Spatial Coincidence
- 3.5 A Simple Habitat Model
- 3.6 Exercises
  - Spatial Analysis Operations
  - Reclassifying Map Features
  - Calculating Change
  - Summarizing Map Regions
  - Characterizing Map Coincidence
  - Evaluating a Simple Habitat Model

## 4. Mapping Visual Exposure

- 4.1 Identifying and Using Visual Exposure
- 4.2 There's More That Meets the Eye
- 4.3 Assessing Visual Impact
- 4.4 Visual Vulnerability
- 4.5 Visual Aesthetics
- 4.6 Exercises
  - Calculating Viewsheds
  - Calculating Visual Exposure
  - Accounting for Screens
  - Calculating Weighted Visual Exposure
  - Modeling Visual Exposure Impacts
  - Extending Visual Analysis to Other Areas

---

## **5. Creating Variable-Width Buffers**

- 5.1 Variable-Width Buffer
- 5.2 Line-of-Sight Buffer
- 5.3 Effective Distance Buffer
- 5.4 Effective Distance Algorithm
- 5.4 Exercises
  - Calculating Simple Proximity
  - Calculating Uphill Proximity
  - Calculating Effective Proximity

## **6. Applying Effective Distance and Connectivity**

- 6.1 Calculating Hiking-Time
- 6.2 Incorporating Effective Distance
- 6.3 Basics of Surface Flow
- 6.4 Characterizing Overland Flow
- 6.5 Constructing Realistic Downhill Flows
- 6.6 Calculating Flow Time and Quantity
- 6.7 Determining Spill Impacts
- 6.8 Exercises
  - Simple Proximity
  - Effective Proximity
  - Identifying Optimal Paths
  - Extending the Analysis
  - Surface Flow Analysis

## **7. Identifying Optimal Routes**

- 7.1 Identifying the Most Preferred Route
- 7.2 Considering Multi-Criteria in Routing
- 7.3 Calibrating and Weighting Criteria
- 7.4 Evaluating Alternative Routes
- 7.5 Exercises
  - Routing Model
  - Extended Routing Model

## **8. Characterizing Terrain Features**

- 8.1 Identifying Micro-Terrain Features
- 8.2 Characterizing Local Terrain Conditions
- 8.3 Assessing Terrain Slope and Roughness
- 8.4 Calculating Realistic Areas
- 8.5 Identifying Valley Bottoms
- 8.6 More on Slope's Slippery Slope
- 8.7 Exercises
  - Deriving Slope
  - Establishing Roughness
  - Identifying Convex/Concave Features

## **9. Analyzing Landscape Patterns**

- 9.1 Summarizing Spatial Context
- 9.2 Calculating Nearby Neighbor Statistics
- 9.3 Analyzing Landscape Structure
- 9.4 Getting to the Core
- 9.5 Assessing Forest Fragmentation
- 9.6 Exercises
  - Calculating Size
  - Establishing Diversity
  - Determining Proportion Similar

---

## Deriving Configuration Indices

### **10. GIS Modeling Procedures**

- 10.1 Constitution of a GIS Model
- 10.2 A Classification Guide for GIS Models
- 10.3 Expressing Model Structure and Logic
- 10.4 Recipes for Solving Spatial Problems
- 10.5 Extending Model Solutions
- 10.6 Infusing Science into GIS Models
- 10.7 Exercises
  - Campground Suitability Model
  - Extended Campground Model
  - Editing and Using Scripts

### **11. Surface Modeling**

- 11.1 The Average Is Hardly Anywhere
- 11.2 Under the Hood of Spatial Interpolation
- 11.3 From Point Samples to Map Surfaces
- 11.4 Benchmarking Interpolation Results
- 11.5 Assessing Interpolation Results
- 11.6 The Bigger Picture
- 11.7 Exercises
  - Interpolating Point data (IDW)
  - Interpolating Point Data (KRIG)
  - Comparing Interpolation Results
  - Evaluating Interpolation Performance

### **12. Spatial Data Mining**

- 12.1 Comparing Yield Maps (Discrete)
- 12.2 Comparing Yield Surfaces (Continuous)
- 12.3 Calculating Field Similarity
- 12.4 Identifying Data Zones
- 12.5 Mapping Data Clusters
- 12.6 Exercises
  - Comparing Yield Maps
  - Comparing Yield Surfaces
  - Characterizing Map Similarity
  - Identifying Data Zones
  - Mapping Data Clusters

### **13. Predictive Modeling**

- 13.1 Predicting Yield Maps
- 13.2 Assessing Prediction Model Results
- 13.3 Stratifying Maps for Better Predictions
- 13.4 Exercises
  - Predictive Modeling
  - Calculating Error
  - Deriving a Stratified Model

## **Epilog**

### **Appendix A. Quick Set of Exercises**

### **Appendix B. Creating Your Own Grid-based Database**
