

# CONTENTS

Foreword by Matt Ball .....	vii
Preface .....	ix
<b>Introduction</b> .....	<b>1</b>
Early GIS Technology and Its Expressions .....	1
Contemporary GIS and Future Directions .....	5
<b>Topic 1. Data Structure Implications</b> .....	<b>11</b>
1 Grids and Lattices Build Visualizations .....	13
2 Maps Are Numbers First, Pictures Later .....	17
3 Normalize Maps for Data Analysis .....	21
<b>Topic 2. Fundamental Map Analysis Approaches</b> .....	<b>27</b>
4 Moving Mapping to Analysis of Mapped Data .....	29
5 Bending Our Understanding of Distance .....	33
6 Use Spatial Statistics to Map Abnormal Averages .....	37
7 Making Space for Mapped Data .....	41
<b>Topic 3. Basic Techniques in Spatial Analysis</b> .....	<b>47</b>
8 Use a Map-mathematical Framework for GIS Modeling .....	49
9 Options Seem Endless When Reclassifying Maps .....	53
10 Overlay Operations Feature a Variety of Options .....	57
11 Computers Quickly Characterize Spatial Coincidence .....	61
<b>Topic 4. Calculating Effective Distance</b> .....	<b>67</b>
12 Extending GIS Procedures with Variable-Width Buffers .....	69
13 Create Effective Distance Buffers to Improve Map Accuracy .....	73
14 Measuring Distance Is Neither Here nor There .....	77
15 Extend Simple Proximity to Effective Movement .....	81
<b>Topic 5. Calculating Visual Exposure</b> .....	<b>87</b>
16 Line-of-Sight Buffers Add Intelligence to Maps .....	89
17 Identify and Use Visual Exposure to Create Viewshed Maps .....	93
18 Visual Exposure Is in the Eye of the Beholder .....	97
19 Use Exposure Maps and Fat Buttons to Assess Visual Impact .....	101

<b>Topic 6. Summarizing Neighbors</b> . . . . .	<b>107</b>
20 Computer Processing Aids Spatial Neighborhood Analysis . . . . .	109
21 Milking Spatial Context Information . . . . .	113
22 Spatially Aggregated Reporting: The Probability Is Good . . . . .	117
<b>Topic 7. Basic Spatial Modeling Approaches</b> . . . . .	<b>123</b>
23 Suitability Models Find the Good, the Bad and the Hugag . . . . .	125
24 Mapping Techniques Rate Hugag Habitat Suitability . . . . .	129
25 Logic and Extent Elevate Suitability Models to New Levels . . . . .	133
<b>Topic 8. Spatial Modeling Example</b> . . . . .	<b>139</b>
26 A Three-Step Process Identifies Preferred Routes . . . . .	141
27 Consider Multiple Criteria when Routing . . . . .	145
28 A Recipe for Calibrating and Weighting GIS Model Criteria . . . . .	149
29 Think with Maps to Evaluate Alternative Routes . . . . .	153
<b>Topic 9. Basic Techniques in Spatial Statistics</b> . . . . .	<b>157</b>
30 GIS Data Are Rarely Normal . . . . .	159
31 The Average is Hard to Find . . . . .	163
32 Under the Hood of Spatial Interpolation . . . . .	167
33 Justifiable Interpolation . . . . .	171
<b>Topic 10. Spatial Data Mining</b> . . . . .	<b>175</b>
34 Statistically Compare Discrete Maps. . . . .	177
35 Comparing Continuous Map Surfaces . . . . .	181
36 Geographic Software Removes Guesswork from Map Comparisons . . . . .	185
37 Use Similarity to Identify Data Zones . . . . .	189
38 Use Statistics to Map Data Clusters . . . . .	193
39 Spatial Data Mining “Down on the Farm” . . . . .	197
<b>Epilog</b> . . . . .	<b>203</b>
A Variety of Pathways Lead to GIS . . . . .	205
A Multifaceted GIS Community . . . . .	209
<b>Appendix/Resources</b> . . . . .	<b>215</b>
Companion CD-ROM Overview . . . . .	216
Additional Online Materials . . . . .	217
Instructor Materials . . . . .	218
<b>Index</b> . . . . .	<b>221</b>
